

Instant Backlinks from DoFollow .EDU Sites

So, these are almost all forums. I have done this because the blog comment locations on .EDUs were starting to get too heavily moderated and largely switching to NoFollow. The idea here is very similar to Paul/Angela's backlinks. These are high authority and .EDU domains and you are going to be creating a profile with your DoFollow link in it. Now, these sites are SEO friendly so your profile will be spidered and indexed; if you want to speed it up though ping/throw social bookmarks at your profile. Just follow the instructions for each backlink, should only take about a minute for each one and you will see your site make some nice gains in SEs in no time!
